

Astik Decision Studio

The decision record behind the dashboard.

A concept for a private workspace connecting validated evidence to executive choices, accountable owners and the next review.

Public context today. Private decisions next.

Stars Market Pulse is available now: explore CMS national trends, contract profiles, measure thresholds and sourced observations. Decision Studio is a concept for the next layer of authorized client context. It is not a launched, self-service product.

01 Evidence	Connect the decision to approved data, definitions, source dates and assumptions. Keep observations separate from hypotheses.
02 Choices	Use Astik's Protect, Push, Prioritize and Park framework to make the rationale, tradeoffs and capacity constraints explicit.
03 Accountability	Record an owner, milestone, escalation point and review trigger so leadership can revisit a decision as evidence changes.

Built around an advisory engagement

A Medicare Performance Diagnostic establishes the client fact base. A Performance Acceleration Sprint supports a defined execution need. An Executive Performance Partnership adds continuing counsel and governance. Any Decision Studio capability would be scoped separately.

Availability and safeguards

Client-data ingestion, forecasts, financial scenarios and automated board narratives are roadmap capabilities, not features of the public explorer. They require approved agreements, secure access, validated methods and human review. No rating or financial outcome is guaranteed.
